AMG Systems Expands Technical Support Team New offices in Oman and India increases in-depth support requirements

July 31 2008: AMG Systems Ltd. announces that Roy Cummings has joined the Technical Support Team in Biggleswade. Roy Cummings has an electrical and electronics engineering background and joins AMG Systems from a position in Tyco Fire and Integrated Solutions, one of the UK's largest systems integrators, where he held the position as Principal Engineer. Prior to this, Roy has gained extensive experience working for major industry names such as Teleste - where he was responsible for sales and technical support to clients throughout the EMEA region, and Coe - where he held the position of Technical Support Executive. Roy has also spent a number of years working in the telecommunications industry – from design of exchanges and network infrastructure through project engineering to research and development.

Founder and MD of AMG Systems Alan Hayes says, "AMG has experienced significant market growth over the past couple of years. With our new offices in Oman and India we appreciate that the technical support team must grow accordingly. I am absolutely delighted we have employed Roy and I am convinced that his in-depth knowledge of the CCTV market and in particular his insight into integrated solutions will benefit all our customers".

Roy Cummings comments, "AMG offers a unique service to its clients. The direct access to free technical support shows the dedication the company puts into each and every project they work with. I have known the company for many years and what particularly attracted me is the fact that in spite of having grown to be one of the leading companies in its field globally, AMG retains its friendly small company feel, and enjoys an excellent reputation and image. Further, AMG's products are cutting edge, and highly acclaimed. Outside of that, the company has always enjoyed a reputation for delivering products of very high quality, something I have experienced first hand when I worked with systems integration. I am therefore very much looking forward to supporting AMG's clients around the globe".

About AMG Systems

AMG Systems Ltd is a world leading provider of video and communication transmission solutions designed for CCTV surveillance operations in the transportation and security sectors. AMG is a global supplier which differentiates itself significantly from other manufacturers by offering benefits such as drop and insert technology, and dual optical redundancy and manageability within an uncompressed transmission system. As a result AMG solutions have been successfully implemented in many high profile projects throughout the world. Projects include supplying the transmission system for the UK's NRTS project, using the innovative Guardian-Lite™ 3700 system. AMG also provided the transmission system for the security and surveillance of the Museum of Islamic Art in Doha, Qatar. In addition to this, AMG have completed projects for Airports, Rail, Ports, Industrial and commercial sites, sports and leisure facilities, Town and City centres, Military, Universities and hospitals.
