AMG selected to supply CCTV transmission system for O2

The world's first fibre optic transmission system that integrates Ethernet & Data with high quality uncompressed video will help protect concert goers and sports fans.

March 27 2007 - AMG Systems Ltd. today announced that it has been contracted by ADT, the UK's leading provider of electronic fire and security solutions, to supply the CCTV transmission system as well as the fibre optic infrastructure installation for the integrated safety and security solution for The O2 (formerly the Millennium Dome), which is set to open in July this year as a world class entertainment destination.

AMG will supply their latest patented CCTV transmission technology Guardian-Lite™ 4700 for transmission of real time uncompressed video simultaneously allowing for viewing of DVR recorded and stored images on the built-in Ethernet channel.

The CCTV surveillance system for The O2 will initially use 237 cameras over half of which are Pan-Tilt-Zoom (PTZ). The Guardian-Lite transmission system also carries data channels which will be used for sending individual instructions from the Control Room for repositioning or change focus for each individual camera.

AMG's founder and Managing Director Alan Hayes says, "The O2 is one of the largest and most prestigious entertainment venue projects in the UK, and we're absolutely delighted to have been chosen to supply the CCTV transmission system. It is testament to how our new digital transmission technology not only provides real time uncompressed video directly to the control room, it also eliminates the need for separate IP, voice or data networks, which in turn allows for minimizing the investment in infrastructure".

"The integrated safety and security solution for The O2, which ADT has been contracted for, includes the installation of CCTV, access control, fire detection and public address/voice alarm (PA/VA) systems. The simplicity of AMG's transmission system means that it is very easy to work with the integrated Ethernet and data channels provided in the units, which is important for a project involving CCTV on this scale," says Tony Harris, ADT UK & Ireland Manager Director. "We have the ability to meet the very challenging demands of this development and proven experience in providing integrated systems using the latest technology at major public venues in the UK".

The O2 is a multi-Million pound development, the centrepiece of which will be an indoor arena for up to 23,000 fans that will host at least 150 music, entertainment and sports events in its first year. Within the facility there will be a music club, cinema multiplex and exhibition space, as well as bars and restaurants in a vibrant 'entertainment district' wrapped around the arena under the roof. The O2 is an official venue for the 2012 Olympics, hosting both the gymnastic and basketball finals.

About AMG Systems

AMG Systems Ltd is one of the world's leading providers of video and communication transmission solutions designed for CCTV surveillance operations in the transportation and security sectors. AMG operate all over Europe as well as internationally. AMG differentiates itself significantly from other manufacturers by offering benefits such as drop and insert technology, and dual optical redundancy and manageability within an uncompressed transmission system. As a result AMG has been very successful in winning large, significant projects throughout the world. Projects include supplying the transmission

About ADT Fire & Security Plc

ADT, part of Tyco Fire & Security, designs, installs and services electronic security systems for retail, business and government and home intruder protection and detection systems. Sensormatic® is a leading brand of ADT. In Europe, ADT's products include alarm systems and integrated security applications that link access control, CCTV, electronic article surveillance and source tagging systems. They are used to deter thieves and protect people, goods and property.

About The O2

The venue is called The O2, not The O2 Dome. The centrepiece of the multi-billion pound development will be an indoor arena for up to 23,000 fans that will host at least 150 world-class music, entertainment and sport events in its first year of opening. Within the facility there will be the Studio2 Music Club with a capacity of over 2,000, an ice rink called the O2 Ice Pad, a 'bubble' shaped world-class exhibition space and a vibrant 'entertainment district' featuring a variety of bars, restaurants, and leisure facilities.

In Zone 2 of London's Underground, The O2 is situated at the North Greenwich station on the Jubilee Line, which provides direct access to central London in less than twenty minutes.

The O2 is an official venue for the 2012 Olympics hosting both the gymnastic and basketball events.
