AMG Enters Partnership with N-Tron

New OEM agreement forms strategic platform for N-Tron in Security & Surveillance

September 22 2008: AMG Systems Ltd. announces that they have entered a global OEM agreement with US based N-Tron Corporation – a world leading manufacture of industrial strength Ethernet switches. Under the new agreement AMG Systems will sell N-Tron products and provide global technical and commercial support.

Founder and MD of AMG Systems Dr. Alan Hayes says, “AMG has experienced significant market growth over the past couple of years and we have been seeing increased demand for solutions where a combination of transmission technologies is required. As Security & Surveillance and IT continues to converge there is a significant market for N-Tron’s technology. The addition of this range of high performance, hardened switches to our product portfolio is a very important move and I am delighted that N-Tron has chosen to work with us for branding and positioning within the security and surveillance sector. We expect strong demand particularly from transportation and security areas where N-Tron’s products, complements our Guardian-Lite™ transmission solutions very neatly and I am pleased to say that we’re already busy with several projects involving N-Tron Ethernet technology”.

Managing Director (EMEA) Mr. Peter Vukmirica comments, “AMG offers a unique service to its clients. The direct access to free technical support shows the dedication the company puts into each and every project they work with. AMG’s products are cutting edge, and highly acclaimed. Outside of that, the company has always enjoyed a reputation for delivering products of very high quality. All of this fits completely with N-Tron’s product- and support philosophy. I am therefore looking forward to a very fruitful partnership over the coming years”.

About N-TRON Corporation

Based in Mobile, Alabama N-TRON develops, manufactures, and markets highly reliable industrial network Products, designed to solve the most demanding communications requirements for mission critical industrial, data acquisition, Ethernet I/O, and control applications. Our customers are engineering and information technology professionals who require Ethernet products to operate in industrial environments with high throughput and minimum downtime.
